

4D Emerging Markets Infrastructure Fund

Performance report | 31 August 2021

Overview

4D Infrastructure is a boutique asset manager investing in listed infrastructure companies across all four corners of the globe. Our investment objective is to identify quality infrastructure companies, trading at or below fair value with sustainable, growing earnings combined with sustainable, growing dividends. The 4D Emerging Markets Infrastructure Fund aims to outperform the OECD G20 Inflation Index + 8% p.a. over the medium to long term (before fees).

Portfolio performance review

The 4D Emerging Market Infrastructure Fund was up a net 2.57% (AUD) in August, out-performing the benchmark return of 1.09% (by 1.48%). Currency contributed a positive 58bps to the performance.

The strongest performer for August was Chinese port operator, China Merchant Port Holdings up 21.1% post a positive H1 profit alert followed by results beating revised expectations. The stock is positioned very well to capitalise on the on-going recovery in demand.

The weakest performer in August was Brazilian port operator, Santos Brasil down 13.1% on profit taking. H1 results were strong and outlook positive but the stock had out-performed and ended up over sold on profit taking

As we move through 2021 the world continues to battle waves of COVID-19 with the recent Delta strain slowing the re-opening of many economies. Vaccine rollout is key to allowing economies to move forward and as it progresses, we expect to see strong demand recovery all around the world. The Northern Hemisphere is leading the charge on the vaccine rollout and the emerging markets are lagging. However, we expect it will ramp up as the developed world's demand becomes less urgent. The long-term structural infrastructure story within emerging markets is intact and we are capitalising on the raft of opportunities currently on offer. We also believe currency remains a tailwind.

Month in review

Now that is money well spent! Recent IMF research shows that when governments invest in infrastructure they create many new jobs. The IMF evaluated the direct employment effect of public investment in the key infrastructure categories of electricity, roads, schools, hospitals, water and sanitation. Using data from 41 countries over 19 years, the IMF estimates that US\$1 million of public spending in infrastructure creates 3-7 jobs in advanced economies, 10-17 jobs in emerging market economies, and 16-30 jobs in low-income developing countries. Overall, the IMF estimate that 1% of global GDP in public investment can create more than 7 million jobs worldwide through its direct employment effects alone.

This type of infrastructure investment is also beneficial to both the publicly listed and private infrastructure sectors as it improves economic efficiency and enhances GDP growth thereby benefitting GDP correlated 'User Pay' infrastructure assets (eg. toll roads, rail, ports and airports) in particular. It also leads to a pool of possible future privatisation candidates which would see the asset class continue to expand.

And it appears the infrastructure investment message may be getting through. After months of negotiations, the US Senate passed a US\$550 billion infrastructure plan that would represent the biggest burst of spending on US public works in decades. The bipartisan 69-30 vote marked a significant victory for President Joe Biden's economic agenda. The bill still faces hurdles in the House, which is scheduled to be on break until September 20. If the package clears both chambers, it includes new spending for roads and bridges, power grid upgrades and broadband expansion.

Similarly, India, Reuters' reports, will launch a 100 trillion rupee (US\$1.35 trillion) national infrastructure plan that will help generate jobs and expand use of cleaner fuels to achieve the country's climate goals, PM Narendra Modi said. The infrastructure program, called 'Gati Shakti', will help boost productivity of industries and boost the economy, Mr Modi said during his speech at the Independence Day celebrations in New Delhi: 'We will launch a masterplan for Gati Shakti, a big program ... (it) will create job opportunities for hundreds of thousands,' Mr Modi said. Boosting infrastructure in Asia's third largest economy is at the heart of Mr Modi's plan to pull back the country from a sharp, COVID driven economic decline.

US Federal Reserve Chair Jerome Powell signalled in his speech at the Jackson Hole symposium that the Fed will likely begin monetary tapering before the end of the year. Importantly though, a reduction in Fed asset purchases will not be matched with a direct increase in interest rates. The Fed will continue to hold the target range for the federal funds rate at 0-0.25% until the economy reaches conditions consistent with maximum employment, inflation has reached 2% and is on track to moderately exceed 2% for some time. 'The Fed has much ground to cover to reach maximum employment, and time will tell whether inflation reached 2% on a sustainable basis' Mr Powell added. The weak August US job numbers released in early September will only increase this 'ground to cover'.

Clearly inflation remains a key factor in the Fed's thinking. Their view has been that recent inflationary 'blips' were 'transitory'. One of the arguments supporting the 'transitory' view has been that temporary 'supply chain disruptions' caused by the pandemic have contributed to recent price hikes. Bloomberg reports that these disruptions remain prevalent in the global economy. Chip shortages that have held back automakers and computer manufacturers are getting worse. Chip lead times, the gap between ordering a semiconductor and taking delivery, increased by more than 8 days to 20.2 weeks in July from the previous month. That gap was already the longest wait time since tracking this data began in 2017. Shortages of microcontrollers, logic chips that control functions in cars, industrial equipment and home electronics jumped in July. Even Toyota is affected. The automaker warned it will suspend output at 14 plants across Japan and slash production by 40% due to supply disruptions including chip shortages. So, the important question is how long will these disruptions last?

Finally, Stephen Hawking was once asked¹: 'What world-changing idea, small or big, would you like to see implemented by humanity?' He answered: 'This is easy. I would like to see the development of fusion power to give an unlimited supply of clean energy, and a switch to electric cars. Nuclear fusion would become a practical power source and would provide us with an inexhaustible supply of energy, without pollution or global warming'. It sounds amazing: a technology that could unleash nearly unlimited clean energy and safely power the world for centuries. Yet Bloomberg reports that sustainable nuclear fusion, long hypothesized, took a step closer to reality in August. Scientists at the US National Ignition Facility, part of the Lawrence Livermore National Laboratory in California, announced that they had produced about 10 quadrillion watts of fusion power after blasting a hydrogen capsule with an array of laser beams. The burst lasted only a fraction of a second, but it offered new evidence that harnessing fusion energy could one day be feasible.
