

4D Global Infrastructure Fund

Performance report | 31 December 2021

Overview

4D Infrastructure is a boutique asset manager investing in listed infrastructure companies across all four corners of the globe. Our investment objective is to identify quality infrastructure companies, trading at or below fair value with sustainable, growing earnings combined with sustainable, growing dividends. The 4D Global Infrastructure Fund aims to outperform the OECD G7 Inflation Index + 5.5% p.a. over the medium to long term (before fees).

Net client returns (after fees and expenses)

Portfolio performance review

The 4D Global Infrastructure Fund was up a net 2.93% (AUD) in December 2021, out-performing the benchmark's return of 0.70% (by 2.23%) but under-performing the FTSE 50/50 Infrastructure Index which was up 4.70% (AUD). Currency detracted 177bps from performance in December.

The strongest performer for December was Chinese port operator China Merchants +18.1% for the month following news of strong tariff increases across key Chinese ports.

The weakest performer in December was Brazilian toll road operator, Ecorodovias down 11.8%. The stock remains unjustifiably pressured on Brazilian inflation concerns.

We continue to position for economic recovery. We believe Central Banks will act prudently and cautiously in adjusting monetary policy in response to inflation pressures. But just at the present uncertainty prevails and caution is warranted. In this regard infrastructure is an asset class that can do well in an inflationary environment and we believe it is a sensible portfolio allocation at the current stage of the economic cycle. Within infrastructure we are favouring user pays and real return utilities.

Month in review

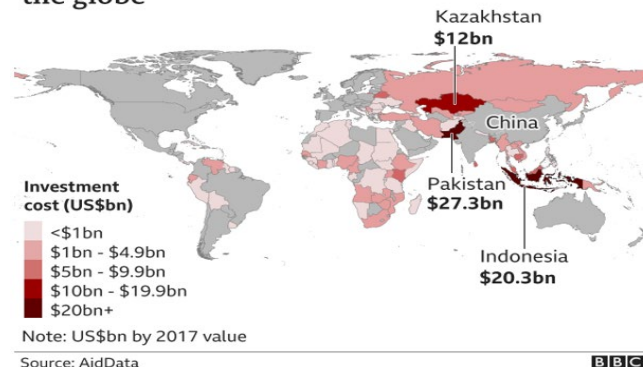

With 2022 with us it is interesting to consider what the year may bring in terms of economics and politics. Firstly, the world economy is set to surpass US\$100 trillion for the first time in 2022, two years earlier than previously forecast, according to the Centre for Economics and Business Research (CEBR). Global GDP will be lifted by the continued recovery from the pandemic, although if inflation persists it may present some challenges for policy makers. The forecast is in-line with estimates of the IMF, which also predicts global GDP measured in US\$ and in current prices will pass US\$100 trillion in 2022. In its annual World Economic League Table, the CEBR also predicted:

- China will overtake the US in 2030, two years later than forecast a year ago;
- India will regain sixth position from France next year and become third largest economy in 2031, a year later than the previously predicted;
- The UK is on track to be 16% larger than France in 2036 despite Brexit and Germany will overtake the Japanese economy in 2033;
- Climate change will lower consumer spending by \$2 trillion a year on average through 2036 as companies pass on the cost of decarbonizing investment.

The EU has revealed details of a €300bn (US\$340bn) global investment plan, described as a 'true alternative' to China's Belt and Road Initiative (BRI) reports the BBC. European Commission President Ursula von der Leyen said countries need 'trusted partners' to design projects that were sustainable. The EU is looking at how it can leverage billions of euros, drawn from member states, financial institutions and the private sector. This will largely take the form of guarantees or loans, rather than grants. Mrs von der Leyen said the EU wanted to show that a different, democratic approach could deliver on projects that focused on tackling climate change as well as global health, security and sustainable development for developing countries. China's

strategy has reached into Africa, Asia, the Indo-Pacific and the EU.

Chinese BRI infrastructure projects around the globe

The Biden administration aims to sign what could prove a 'very powerful' economic framework agreement with Asian nations in 2022. It will focus on areas including coordination on supply chains, export controls and standards for artificial intelligence, Commerce Secretary Gina Raimondo said. She said the aim is to engage not just developed nations such as Japan, Singapore, Australia and New Zealand but also emerging economies such as Malaysia, Vietnam and Thailand. Raimondo said that her trip to Asia in November 2021 was designed to 'assess appetite' for economic dialog, under the condition that President Joe Biden's team isn't planning to take up traditional trade talks.

The 2021 update of the IMF's Global Debt Database documents the largest one-year debt surge post World War II. As countries were hit by the pandemic, global debt rose to US\$226 trillion, or 256% of global GDP in 2020. Borrowing by governments accounted for slightly more than half of this increase, as global public debt jumped by 20%. The share of public debt in global debt reached new highs not seen in more than 50 years, reflecting a large cumulative increase since the GFC. Private debt rose by 10% in 2020, partly reflecting the support of central banks and government. The rise in debt varied significantly across countries.

Historic highs
In 2020, global debt experienced the largest surge in 50 years. (debt as a percent of GDP)

Sources: IMF Global Debt Database and IMF staff calculations. Note: The estimated ratios of global debt to GDP are weighted by each country's GDP in US dollars.

Finally, US President Joe Biden faces a referendum on his performance with elections in November for the House and more than half of the seats in the Senate. His popularity has been on a downswing as he battles to get his overarching economic plans through Congress.

Fund details

Feature	Information
APIR code	BFL0019AU
Investment manager	4D Infrastructure
Portfolio manager	Sarah Shaw
Reporting currency	A\$ Unhedged
Recommended investment period	Five years
Stock / cash limit	+7% / 10%
No. of securities	42
Application/redemption price (AUD) ³	1.5632/1.5538
